Introduction

What does it do?

The maag_formcaptcha extension protect your standard mailforms with a captcha code. The extension based on the nd_antispam extension from Nepa Webdesign.

Requirements

This extension requires TYPO3 4.1.6+ and PHP 5.0+.

Captcha Library must be installed (Extension key "captcha").

Users manual

After installation, there are 3 new field types in the form wizard.

- **Captcha Image** The Captcha Image from the Captcha Extension
- **Captcha Input field** The Captcha Input field for entering the code from the captcha image. Note that the field name is read-only and can not be renamed.
- **Captcha Error page** The Captcha Error page. The Url of a page for showing a error message if code was invalid. Note that the field name is read-only and can not be renamed.

Preview of element:	Element type:	Detailed configuration:
	Type: <input type="text" value="Input field"/> Label: <input type="text" value="Name:"/> Required: <input checked="" type="checkbox"/>	Field: <input type="text" value="name"/> Size: <input type="text" value="40"/> Max: <input type="text"/> Value: <input type="text"/>

Configuration

General

TypoScript Reference

Please note that the following properties TS template setup are written in a "plugin.maag_formcaptcha" section.

Property:	Data type:	Description:	Default:
tt_content.mailform.20.captchalImage	string	If this property is not set, the extension renders a image tag like follows: If you wan't to add other attributes to the image tag, feel free and make it with this property. Not that the "src" attribute must be the captcha source of the Captcha Library.	see in Description

TypoScript Setup

You should use the following settings (example):

```
tt_content.mailform.20.captchalImage {  
    captchalImage =   
}
```

To-Do list

nothing yet to do.

Changelog

Version 1.0.0:
